

Blobitecture: Waveform Architecture and Digital Design

The Apple iMac; the new VW Beetle; the Oh Chair; the Guggenheim Bilbao museum. These are all classic examples of blobism, a futuristic retelling of the curve, resulting in protoplasmic forms designed by computers. A growing number of inventive architects are now embracing this concept, making blobitecture the hottest global trend in the industry. This title focuses exclusively on the phenomenon in detail: how the process works; the geometrics and environmental challenges it presents; the sophisticated software that allows artists to bend the lines of traditional architecture and the stunning work produced by this art form. Featuring curved walls to blob-esque furniture to Greg Lynns Embryological House and Koloatan and McDonalds Title House, this is both a showcase of the best in blobism, illustrated through computer-drawn renderings, illustrations and photographs, and a guide to applying it in a designers own work.
