

# Intellectual Property and the National Information Infrastructure: The Report of the Working Group on Intellectual Property Rights

This Report represents the Working Groups examination and analysis of each of the major areas of intellectual property law, focusing primarily on copyright law and its application and effectiveness in the context of the NII. The approach of this Report is to discuss the application of the existing copyright law and to recommend only those changes that are essential to adapt the law to the needs of the global information society. By providing a generalized legal framework, based on the extensive analysis and discussion of the way in which the law has been and should be interpreted, we can lay the groundwork for the rapid and efficient development of the NII.
